

CASCADE GATEWAY CROSS-BORDER ROAD NETWORK

July 15, 2010 Version

IMTC Cascade Gateway Border Circulation Analysis

- International border crossing
- Forecasted congestion points

Note:
This map represents the roads in Washington and British Columbia that would logically serve most cross-border trips and would most efficiently serve drivers' diversion to alternate border crossings through the Cascade Gateway.

Forecasted congestion points are based on the Whatcom Transportation Model 2032 No-build scenario, and the Trans-Link Model 2021 PM Peak Volumes and Volume/Capacity Ratios.
